

Highways Authority: Holding Objection

Consultee response · dated 2026-07-22

- 1.** Holding objection. The Transport Assessment underestimates trip generation and does not model the Mill Lane / Reading Road junction, which operates at 96% capacity in the PM peak. A junction improvement scheme is likely to be required, estimated at £650,000 to £900,000.
- 2.** A second access for emergency vehicles is required. Pedestrian and cycle links to the station (1.4km) must be provided.
